FRIDAY SEPT. 28th 1934

NUMBER 29

Bank of Montreal Fortnightly Crop Report

GENERAL—Threshing is well advanced in the southern and central areas of the three Prairie Provinces but intermittent showers have delayed operations in the north, where the crop is more backward and where the grades will be lower owing to damage by frost. Pastures have benefitted by rains but further moisture is required in southern and central areas to aid fall plowing. In Quebec crops in general are up to average throughout the province. In Ontario heavy rainfall has benefitted corn and root crops which now give good promise. In New Brunswick grains promise an average yield and potatoes are a good crop. In Nova Scotia crops are below average due to dry weather. In British Columbia crops generally are good. Details follow:

PRAIRIE PROVINCES

Alberta—Northeastern Area—Wheat is mostly cut and about 25% threshed. Considerable areas of coarse grains are still uncut. Yields and grades vary considerably. Southeastern Area—Harvesting is nearing completion. Wheat is grading high with yields varying from poor to fair. Western Area—Wheat cutting is almost completed, but only a small percentage is threshed. Harvesting of a satisfactory crop of sugar beets has commenced. Saskatchewan—Northern Area—From 50 to 60% of the wheat threshing has been completed and reports indicate a wide variation in yields. Coarse grains are a light crop. Southern Area—Threshing is nearing completion and most of the wheat is grading high but yields are poor. Coarse grains were a failure, or were cut for green feed. Manitoba—Threshing is nearing completion except in the most northerly area. The wheat yield is slightly above that of last year and to date is grading high. Many districts are short of feed and grains and fodder will require to be shipped into drought areas of the south west.

PROVINCE OF QUEBEC

Recent rains have proven beneficial to pastures and root crops but have delayed somewhat the harvesting and threshing of grains. Yields of spring wheat, barley and oats are reported as being up to average in both quality and quantity. Corn promise to be a good average crop in most sections. Potatoes and other roots are progressing favourably. The tobacco crop is reported generally as satisfactory, cutting has been completed in some cases. Apples will be about 50% below average. Pastures are in fair condition only.

PROVINCE OF ONTARIO

Threshing of spring grain now well advanced is showing better than average yield from a slightly increased acreage. Corn cutting and silo filling are underway. A good yield from an increased acreage with the best crops in areas suffering from short hay and straw supplies will do something to offset a winter feed shortage. The root crop map yield a little better than average tonnage except in sugar beets which will be 30 to 50% under normal. The apple crop is being estimated at from 80 to 50% below average. Potatoes will be half the average crop. Grapes will give an average yield from increased acreage. Wet cool weather caused some second growth in tobacco plants further retarded maturity and delayed harvesting, which is proceeding slowly. Indications are that flue cured and burley yields will be 25% under last years production.

"ROTHSCHILD" USES NEW COLOR PROCESS

FINAL SCENES OF ARLISS
FILM A BREATHTAKINGLY
VIVID SPECTACLE

The final scenes of "The House of Rothschild", in which Nathan Rothschild, in the person of George Arliss, is publicly honored for his services to England, were adjudged by producers Joseph M. Schenck and Darryl F. Zanuck to be too magnificent a spectacle to be wasted on black and white film. And, since a large sum was already invested in the richly decorative court costumes of the period worn by the two hundred actors and actresses participating in the scene and the sets, designed by Richard Day and accurately reproducing the sumptuous coronation room of St. James Palace where the event occurred, they decided to give the audience the full benefit of their splendor and called in Technicolor experts to photograph the scenes in the newly developed three color process, which had never before been used on a set of this size. See it at the Capitol Monday and Tuesday.

News Notes

Geo. Brewerton was a Magistrate visitor Wednesday evening.

In Ontario bye-elections on Monday, Liberals won four out of five of the seats. Liberals gained two from the Conservatives in this voting.

Mrs. Emily Max was the holder of the lucky ticket at the Capitol Wednesday night when \$20 should have been given away. She was not there however, and as a result, \$30 will be given to the lucky person next Wednesday night, providing they are in the house. Better be there.

Harris Walker, Fay Walker and Howard Keith all left last week to start their year's work in the B. Y. U. We commend these boys for their efforts toward higher education, and the work they put in to accomplish this could well be copied by others of our young men, who have a future to build for themselves.

MARITIME PROVINCES

Reports from New Brunswick indicate that although short in the straw the yield of barley, wheat and oats will be up to average. Potatoes are a good crop; an other root crops are progressing favourably. The apple crop is light. Pastures are in fair condition. In Nova Scotia the yield of grains will fall below average due to lack of moisture. This condition has also adversely affected early apples. Potatoes and other root crops are fair. Pastures need rain badly.

PROVINCE OF B. C.

Cooler weather with general rains has improved roots and pastures in all districts. An average crop of grain has been fully harvested. Haying operations are completed in most districts and a heavy crop harvested. Tomato canneries generally are through operations for the season, the yield and quality were average. Potatoes in most districts are of good quality and yielding heavily. McIntosh Red apples are a good crop and are being released to market under a brisk demand. Picking of apples has commenced in some districts.

Beets Rolling In Now!

The Factory will start slicing beets again Saturday morning at 8 a.m., when it is expected that in the neighborhood of 6,000 tons will be in the sheds at the starting time. About 2,000 tons were taken in Thursday over the district, and with the exceptionally fine weather Friday, officials expected that over 3,000 tons would be received, and the sheds at the Factory were receiving beets all day which they expected would total 500 tons for the day. Beets were passing down the street Friday in trucks and wagons, some of them well loaded and some of them only partly loaded, due to the mud and softness in the beet fields. It is hoped that three weeks or a month of good weather will be dish-ed up now so that the harvest can be rushed, and Factory officials are urging growers to get their beets out of the ground and stored in safety just as soon as possible. Siloing of beets will likely start the middle of next week.

If You Lose Out Don't Blame Us!

Just a word or two about our subscription offer, which is now on. The time is slipping away, and few have availed themselves of the opportunity of saving 25% on the amount of their subscription account. Of course if this is too trivial to be bothered with, we have nothing more to say. One point however, we would like to make plain. No notices or statements will be sent out under this offer. Subscribers must come into the office and pay up without the cost of collecting the account to get the benefit of this saving. After October 15th, we will mail every one a notice of their subscription account, but IT WILL BE AT THE REGULAR RATE. We hope that no one will feel put out when we come after them for their subscription at the regular price. We have made this offer about five weeks in duration in order to give everyone a chance to cash in on it. When we start collecting it will be at the regular \$2.00 per year rate. ACT NOW, and reap the benefit.

Good progress is being made on the new home of Mr. and Mrs. Dick O'Brien, being built just south of his parents place.

The heavy snow Saturday made the road very heavy, and the Greyhound was almost an hour late, travelling in intermediate a good share of the way.

Heavy Snow Storm Halts Operation

Not since 1907 according to chronologists, have we had a September snow storm of the liberal proportions of our present one. In that year, starting on Sept. 10th, there was a fall of 18 inches, and all uncut grain had to be harvested one way after that flattening. Well, we have a real soaking snow this September too. Starting Friday forenoon, it stayed with it steady for three full days, not letting up until Monday morning, when the skies commenced to clear, and a heavy frost early Tuesday morning had paths solid until the middle of the forenoon. Rain fell nearly all Thursday night, which had things well soaked up when the snow commenced Friday forenoon. All day Friday and part of Saturday the snow melted as it fell, so that any definite check-up on the depth of what fell is hard to arrive at, but it certainly has things well soaked up, and it will be ten days or two weeks before roads will be dry and good for hauling again, and almost that long before threshing can be resumed.

Local beet growers were just ready to start digging, when the storm broke, and beet racks and plows were seen standing ready for the harvest just as soon as fields and roads would permit harvesting taking place. Due to running out of beets, the slicing end of the Factory had to be shut down during the early hours of Monday morning, and has not been able to start again as yet. If the weather remains good, slicing will likely start over the week end, and then if the weather permits there will be no more shut downs until the final whistle blows. The refining end of the mill kept going, and several hundred tons of molasses were worked over during the lull.

While nothing definite is known regarding sugar content, etc., since the storm, no damage is anticipated to the roots, although there may be a slight fall in the sugar content of the roots due to the storm, but there will be an increase in the tonnage which will help to offset this drop. Every effort is being made to prevent a complete shut-down of the mill, and digging is going ahead now in some of the fields. Siloing on the farm will be permitted also, and every effort will be made between the Factory officials and the growers to keep the loss from frozen beets down just as low as possible. The officials recommend that small lands be worked, and that all beets topped and piled be hauled into the sheds the same day to prevent loss from unexpected frosts and storms.

Pres. Anthony W. Ivins Passes in Salt Lake City

News Notes

Hyrum Ririe of Magrath was in Raymond Monday.

Sidney Schow went to Cardston on Monday's bus, to await the re-starting of the Factory.

Mr. and Mrs. Robert Salmon are getting nicely located in their suite in the Erickson home.

Small crowds at Church services all day Sunday were the result of the storm and almost impassable roads. It snowed continually all day long.

Bishop Walker was confined to his home for several days over the week-end with a heavy cold which turned to pneumonia. He was reported as feeling somewhat better on Monday.

There will be plenty of mud and dirt during the first few days of the beet harvest, even if they do wait for the snow to melt before a start is made.

Mr. and Mrs. Henry Gibb, Mr. and Mrs. S. B. Smith and Mr. and Mrs. S. I. May were Cardston visitors Thursday, and attended the Temple sessions.

We noticed one nicely painted beet rack on the street Friday with a large sugar beet painted on its side. Evidently this grower believes in advertising.

Hauptman, who is held for extortion in the Lindbergh case, pleaded not guilty when arraigned in court, and was let out on \$100,000 bail.

Pres. and Mrs. O. H. Snow are leaving today to attend the L.D.S. General Conference in Salt Lake City. Pres. Snow will represent the Stake, and Mrs. Snow the Relief Society.

There is no substitute for a nice Personal Xmas Card. We have the finest line ever this year at \$1.25 per doz. and up. Come in and look them over. It will cost you nothing.

Mrs. Ammon Anderson is a patient in the Lethbridge Hospital, convalescing from an operation for inward goitre, performed last Saturday. She is doing as well as can be expected.

Mrs. Geo. Wall was in Lethbridge Monday, where her son Eldon took the train for Brantford, Ontario, where he will attend school. Byron Wall took them to Lethbridge.

Hog prices fell off considerably this week on the Calgary market, and this happened just about the time producers were getting their fall supply of hogs ready to turn off. Well, these things do happen.

British Columbia has placed a \$10 bounty on Cougars and according to Ranger Bevan, who has the Goat mountain lookout, this animal is plentiful. During the recent forest fires, the deer took to the mountains, only to be driven out by the ferocious cougars. Several have been killed this summer and fall in the bushlands of Alberta.

Speakers at the Raymond Second Ward Genealogical Program Sunday evening were Fred O. H. Snow and James S. Anderson. Special musical number included a Male Quartette by F. R. Taylor and Co., and Vocal Solo by Mrs. M. Brown. A very enjoyable meeting is reported although the crowd was small, due to the storm.

President Anthony Woodward Ivins, 82 years, first councillor to President Heber J. Grant of the L.D.S. Church died suddenly on Sunday, Sept 23rd, of a heart attack. News from Salt Lake City announced his death here and President Allen, close friend of the deceased President expressed his grief, stating that President Ivins was one of the outstanding men of the country, a pioneer and prominent in the founding of the Mormon colonies in Mexico.

Born at Tom's River, Ocean County, N.J., on Sept 16th, 1852 he was the son of Israel Ivins and Mrs. Anne Lawrie Ivins, who came to Utah in 1853 when the latter colony of Mormons was but six years old.

He was a recognized authority on the history and lore of Ancient America and the Indians and being an outdoors man wrote entertainingly of life in the open. President Ivins had few superiors as a campfire companion, having a fund of thrilling stories of the old West and an ability to clothe them with fascinating word pictures. He first visited Southern Alberta in 1912 and again in 1923 at the dedication of the Cardston Temple.

News Notes

Weldon Bascom was a business visitor in Lethbridge Monday afternoon.

Dick Weyling is back from British Columbia for the Factory run. His wife and children are expected here in a few days.

People have been trying to remember how many years it has been since we had as heavy a snow as this in the month of September. Who can tell us?

It was reported Tuesday forenoon that one grower had plowed and topped a load of beets and was unable to get them out of the field because of the soft ground and mud.

Fritz Gehmlich made a trip to Lethbridge Monday evening to meet Miss Olson, and bring her home, when she was returning from a short vacation trip. The roads Fritz said were awful.

Red Deer district reports the late hatching of Pheasant broods and express the hope that sports men will not shoot these young birds in mistake for the partridge which is small when fully matured.

A splendid Westinghouse Co. sole Radio is being given away at the conclusion of Anniversary Week at the Capitol next week. Lee has an unusually fine lineup of pictures for this week's entertainment.

The gravelled roads leading out of town, and from Raymond to Welling junction are badly in need of graveling again for surface, and in our opinion should not be left too long. They are quite bumpy.

The Provincial Government received payment of \$453,450 from the Alberta Wheat Pool, this being the annual installment of principal and interest due this month on account of the 1929 Pool overpayment.

Fog and clouds Friday morning gave way to sunshine in the middle of the forenoon, and the day was perfect Indian summer. Where but in Sunny Southern Alberta could one find such weather for the last of September.

THOSE GLARING HEADLIGHTS

During the past two or three weeks, there have been two or three deaths, several more or less serious injuries, and a number of absolutely wrecked cars as a direct result of bright and glaring headlights. Is there nothing that can be done about this serious menace to the safety of travellers at night?

When one considers the value of a human life, how is it that drivers will be so reckless as to charge full speed ahead with their lights glaring and see a fellow traveller, dim his lights slow up, and get over just as far as he can to make the road safe for the road hog. In giving three fourths of the road to prevent a crash, the careful driver or sometimes finds himself in the ditch, and the selfish one roars serenely by, and gains at how smart he is in making the other fellow shiver in his shoes.

We are always in a hurry when we are on the road at night but its foolhardiness to take the chance ourselves, and force others to take the chances we force upon them, in order to get there five or ten minutes sooner. Just one misjudgment, in our extreme hurry, and we would either be handed a harp

or a shovel when we came to, and our hurries and scurries would be over.

In view of the law that is on the statute books re driving with bright and glaring lights when passing other cars, we think the traffic police of most any of our cities could profitably spend an evening or two out on the highways checking and prosecuting the offenders in this respect. And, judging by our own experience, the offenders are legion. Dimming one's lights two or three times as a supplication for approaching drivers to do likewise is just a waste of energy. Trying to play safe is possibly more dangerous than thundering along at 45 or 50 per and taking your chance, the same as others do, and yet many really try and play safe and use good judgment in passing other vehicles at night.

Really it is regrettable that with the laws we have on our books, there are so many absolutely fearless law breakers, and regrettable too, that they get away with it so repeatedly, and on every road in the country that we have been on. It is getting to the point where manufacturers of motor cars might as well leave a dimmer off their cars as far as it being used is concerned. We would personally, like to have some effort made to enforce the law re headlights, or else take it off the books. Better not have the law, than to have it and then uphold the populace in breaking it. Night driving is always hard on the nerves, and when coupled with it is the constant danger of glaring headlights and the frequent serious consequences, it seems time something was done about it.

WANT THE NEWS

There is scarcely a week passes but some will ask "How much will it cost to put this in the paper?" having reference of course to a piece of news. News cost nothing to the public and to the publisher of the paper upon which it is printed and office expenses in producing the newspaper, the publisher in turn must make his revenue from the sale of advertising space in his journal. Only news of an event at which an admission is to be charged or a collection made for monetary gain, does the publisher of the average weekly newspaper ask payment, for in such cases news becomes in reality an advertisement.

Several weeks ago, Mrs. Olivia Dionne of Corbiel, Ontario gave birth to quintuplets—this was news, details of which were sought from all parts of the world—it was something unusual, yet a brother-in-law of Mrs. Dionne phoned a newspaper at North Bay telling them of the incident knowing it was an unusual happening, and asked how much it would cost to have an item put in the paper about it. It was one of the biggest news stories of the year?

We are not expecting the birth of quintuplets to become frequent news, but there are often happenings going on in and around Raymond that are items of news which never get into a newspaper because we are not tipped off, or because on the other hand, some people have the idea that anything going into the press has to be paid for. If any reader has any news suitable for the Recorder send it in or let us know so that we can get particulars and make

AIR-CELL BRINGS
AN ENTIRELY NEW
THRILL IN RADIO

"Heard the big ball game this afternoon, Jim—came in clear as a bell too. No, we haven't electric wiring in our house, but our new Air-Cell radio sounds every bit as good as my cousin's electric set down in the city."

"I used to get into town every time our storage battery ran down. This new radio uses an Air-Cell battery that never needs recharging. I don't mind staying home, though, because our Air-Cell set brings in programs we never heard clearly before."

"That new Air-Cell radio is a wonderful convenience. Our old storage battery was always giving trouble, and half the time we couldn't get the music loud enough. This new set has such an even current that you can hear perfectly all the time."

EVEREADY RADIO BATTERIES

The invention of the EVEREADY Air-Cell "A" Battery has made possible this entirely different battery-powered radio that gives the glorious full tone hitherto only heard in electric sets.

The EVEREADY Air-Cell "A" Battery lasts for at least 1000 hours, which at a house a day is almost a year's service in the average household, and so does away entirely with the annoyance, expense and loss of time due to frequent recharging.

Used in conjunction with EVEREADY layerbuilt "B" Batteries, Air-Cell radios, made by the leading radio set manufacturers, will perform with all the simplicity and reliability of any electric set.

5. GUNS AND AMMUNITION

THE gun for Skeet is the gun habitually used by the shooter in upland shooting; in other words, the one that fits him. A good Skeet gun is substantially a good one for game birds as well.

Certainly, there is no necessity to spend hard-earned dollars on a new, special gun. If you are starting the game for the first time, and if you have never shot before, and therefore have to buy a gun, pay strict attention to fit, boring, weight, and calibre. Most important of all is to see that your gun fits. Here it is a well to get the advice of some old hand at the game, and also to gain practical experience for yourself by shooting borrowed guns for a while until the right one for you is obvious.

The sight of the gun-rack at a Skeet Club would be an eye-opener to the old, prejudiced trap-shooter. Double-barrelled, single-barrelled, under and over, pumpguns, automatics, all line up together, cheek by jowl. And all the way from 12 gauge

down past the 16s and the 20s to the 28s and the beautiful little .410 gauges, whatever the shooter owns or prefers. In rare instances only is the pump a good gun for the beginner at Skeet, unless he is a wizard at it.

Skeet shooters use anything from trap loads of 7½ shot to 10 shot with good results. The best ammunition is the regulation Skeet load of number 9 double chilled, put up by the manufacturers for this purpose. The use of this load is becoming universal. There is nothing better to give the required density for clean breaks in all gauges and in open guns.

Remember, a good fitting coat or shooting jacket is essential, one that does not bag under the arms. Many Skeet shots are faster than real birds, and no one should handicap himself with a badly fitting garment. Guns have to come up quickly and a little surplus ridge of cloth or buckskin may just throw enough snag in the way to cause you to miss that spinning target.

This is No. 5 of a series of 12 articles on Skeet Shooting. Cut it out. When all have been clipped, you will have a complete write-up of this sportsman's sport which is rapidly becoming the vogue across Canada.

HEALTH

A HEALTH SERVICE OF THE CANADIAN MEDICAL ASSOCIATION AND LIFE INSURANCE COMPANIES IN CANADA

SHORT OF BREATH

Under certain circumstances, it is quite natural to be short of breath. When you have spent your money, you are short of cash until you can earn more; having spent your breath in some unusual physical activity, you are short of breath until you have had time to take in more air.

Normally, we breathe at a rate of about eighteen or twenty times a minute. Ordinarily, we are not conscious of breath-

ing as we continue to inspire and exhale in an automatic way. It is only when we think about it or when we become breathless, that we are aware of the rising and falling of the chest as the air is taken in or passed out.

Carbon dioxide, a waste product of all activities of the body is get rid of through the lungs. Any increase of carbon dioxide in the blood, such as would result from physical activity, augments the rate and depth of the breathing in the effort to eliminate it. It follows that when we are asleep, with body activities at their lowest, then it is that breathing is the most quiet.

We may say that there are two types of shortness of breath. One physiological or normal, which follows upon some active work or play; the other pathological or abnormal, which follows upon some mild exertion which ordinarily would not cause dyspnoea or shortness of breath.

The important question to be answered in each case is: Why has this condition developed? What is the cause? Now, we know that disease of the heart

may be responsible; we also know that overweight, kidney disease, or disease of the arteries may be mentioned as some of the possible causes.

It is not to be thought that every person who finds himself or herself breathless has something definitely wrong. On the other hand, if it is found that ordinary walking causes some increase in the rate of breathing, or that walking up a flight of stairs means a gasp or two, that is certainly not normal.

If you are, by chance short of breath, do not try and diagnose your own case and give needless worry to yourself and your friends. Perhaps there is nothing wrong except that you are overweight, and the fat in and around your heart is interfering with its work. The one sensible thing to do is to find out if there is anything wrong and if there is, to set about correcting it through proper care and treatment.

Questions concerning Health, addressed to the Canadian Medical Association, 184 College St., Toronto, will be answered personally by letter.

WEEKLY LETTER

Building an Earth Dam for a Farm Reservoir on the Prairie

A water reservoir affords a feasible means of storing water that ordinarily runs off the land on many prairie farms each year and since the dam is a main part of the reservoir once a suitable site has been found, your writer is devoting this week's letter to the building of an earth dam recommended for ordinary farm use.

The spillway is so important a part of the reservoir that it should be given first consideration. It is usually made by digging a ditch around and some distance away from one end of the dam. The purpose of the spillway is to carry away any water, especially in time of flood, that cannot be held in the reservoir and it is therefore important to make the spillway ditch with plenty of width and the bottom of it should be at least three feet below the top of the dam. This is to provide ample freeboard and prevent the water from running over the top of the dam. Many earth dams have been washed out through lack of adequate spillway facilities.

An earth dam should measure 8 feet across the top when finished and its bottom width should be 5 times the height of the dam plus the top width of 8 feet. This provides for a 3 to 1 slope on the water side and 2

to 1 slope on the dry side. The water side is made with more slope to give extra protection against wave action.

An easy way to lay out the foundation for the dam, described by F. H. Peters in his bulletin on farm water supply, is worth quoting. "Start by marking the centre line of the dam across the gap to be filled in, with stakes 10 feet apart. Set the first stake at one side where the top of the dam is going to come. Then sight across with a level, a carpenter's level will do, and mark the height from the level line to the ground at each ten-foot stake. The last stake fixing the other end of the dam will come where your level line hits the other side hill or slope. Then at each ten-foot stake, figure out from the height marked what the bottom width will be and then mark out half this width on each side of the centre line and at right angles to it with slope pegs. When you are finished, the area marked out by the slope pegs will show the foundation for the dam and it will be shaped like a big willow leaf, broad in the middle where the dam is going to be highest, and coming to a point eight feet wide at each end."

The sod on the reservoir area must be left undisturbed (this applies to prairie dams rather than those built in irrigation districts), otherwise seepage losses are likely to be increased unnecessarily. However, the sod from the foundation area of the dam should be removed to ensure a good joint. This sod should be put on top of the dam when finished. The dirt packs better if it is moist and in place the dirt in the dam it should be built up in thin layers rather than dumped in piles. The borrow pit from where the dirt is taken to build the dam should not be closer than 8 or 10 feet to the outside foot of the dam.

The water slope of the dam needs to be protected against wave action excepting where the reservoir is very small. Rock rip rap is best if properly laid, but where not available, a good covering of straw, sage brush, small willows, weeds or buckbrush serves well. Wire netting with posts driven into the earth slope or heavy brush may be used to hold the finer material in place.

NOTICE TO CREDITORS AND CLAIMANTS

IN THE ESTATE OF YOSHIO HATANAKA, LATE OF RAYMOND, ALBERTA, FARMER, DECEASED.

NOTICE IS HEREBY GIVEN that all persons having claims upon the estate of the above named Yoshio Hatanaka, who died on the 13th of December, A. D. 1933, are required to file with the undersigned by the 3rd day of November, 1934, a full statement, duly verified, of their claims and of any security held by them, and that after that date the executor will distribute the assets of the deceased amongst the parties entitled thereto, having regard only to the claims of which notice has been so filed, or which have been brought to his knowledge.

DATED this 19th day of September, A. D. 1934

Z. W. JACOBS, Solicitor for Kichizo Takaguchi, the Executor, Cardston, Alberta.

The FIRESIDE PHILOSOPHER

By ALFRED BIGGS

Thoughts are deathless.

Use everything; abuse nothing.

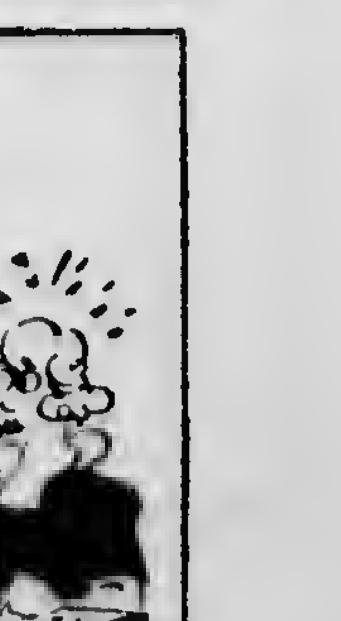

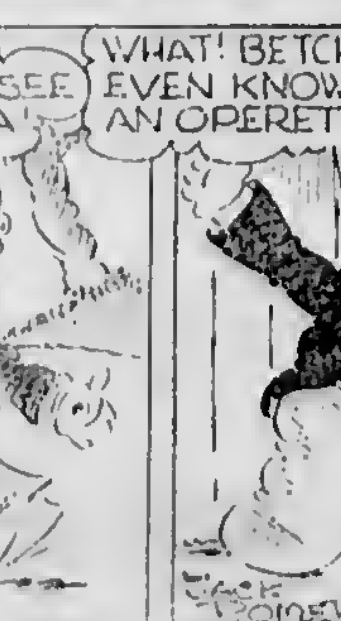

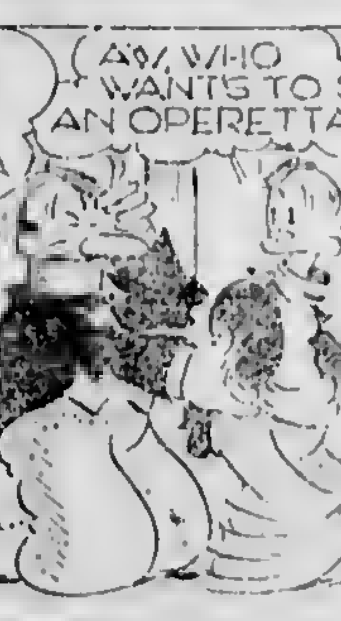

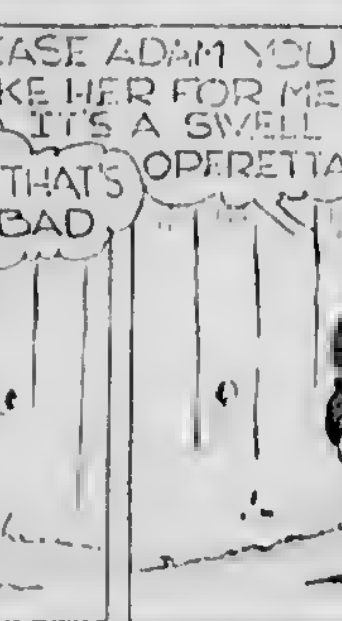

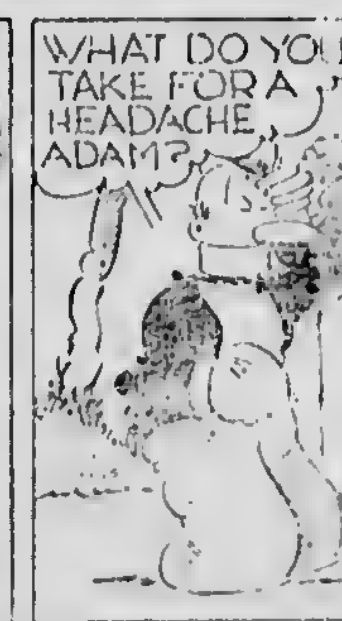

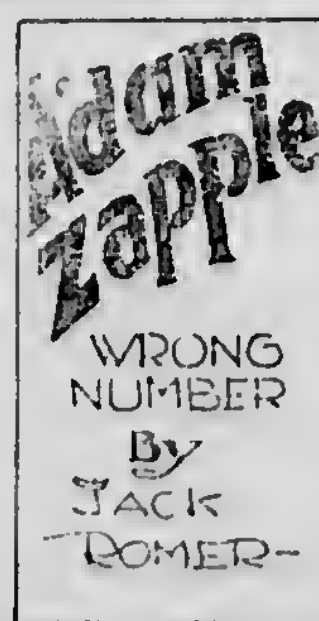

Don't give praise merely to win approval.

Every village contains a potential Lincoln.

Anyone can be courageous in the absence of danger.

The question is: what are you; not who were your ancestors.

The President couldn't fill his job if he were worried about paying next month's rent.

Anniversary Week, October 1st to 6th, 1934

2 Shows Each Night Commencing at 7:15 p.m.

MONDAY and TUESDAY

An Event of Unusual Distinction !!

GEORGE ARLISS IN

"THE HOUSE OF ROTHSCHILD"

His peak performance -- Eclipsing even his great Past Performances.

WITHOUT QUESTION THE SCREEN'S GREATEST MASTERPIECE !

The Objective!

Alberta Pool Elevators are out to prove that a co-operative grain handling concern can be an instrument of usefulness to all grain growers and a successful business concern as well.

Every grain grower in the vicinity of an Alberta Pool Elevator is invited to aid in this effort to perpetuate in Alberta, by Alberta farmers, for the good of all, a strong, grower-controlled, co-operative elevator organization.

This can be done with advantage by delivering grain in wagon lots or car lots to

WANTED—Three passengers to the Temple for Thursday, October, 4th. Call at Recorder Office.

The 1st Ward M.I.A. are holding a Harvest Ball in the Opera House tomorrow night. This is their first Budget entertainment.

THE PROPER CARE OF YOUR AUTOMOBILE

Care of the Finish

ALL automobile finishes become dull and faded when they are exposed to the weather for a few months. The ultra-violet rays of the sun gradually disintegrate the film-forming ingredients in the finish, causing the loosening of tiny particles of pigment. Commonly called chalking or weathering, this results in the roughening of the originally smooth and glossy finish. These tiny particles of pigment, together with an accumulation of dust and dirt gather on the surface of the car, forming a thin hard coating which we call "traffic film."

It is a mistake to believe, however, that when this film has formed over the finish causing it to appear dull and faded, that the only thing that will bring it back is re-finishing. Of course, if the weathering has been permitted to progress, until it has penetrated through to the undercoat, re-finishing is necessary, but just as long as there is a layer of the original finish on the car, it can be restored by polishing. Most cars just need the removal of the traffic film, and the application of a correctly formulated polish, to renew the lustre of the finish.

Gordon Brewerton of Cardston was a business visitor here Wednesday.

Running through for a very close win on Tuesday, the American yacht Rainbow, took the fourth race from the English ship Endeavor. Both yachts crossed the finish line with their protest flag flying.

The thermometer done a nose dive Monday evening reaching five below at Blairmore, Zero at High River, four above at Lethbridge and one above here. The lowest in 32 years for this part of the country at this time of the year.

The World's Series will start next Wednesday. While it looks like it will be a fight between the New York Giants and the Detroit Tigers, there is still a chance that the St. Louis Cardinals will oust the Giants from the race in the final home stretch.

The Bonne Amie Club held a Bridge party at the home of Mrs. J. G. Kirkham. Mrs. Frank Leavitt took the prize with a very high score. A delicious lunch was served. Mrs. Frank Shaw assisting the hostess. The table was prettily decorated with pink and white roses. Mrs. W. Widdell was the visiting guest.

IF WE ONLY COULD . . . !

A Minnesota Editor moralizes thusly:

"If we could all switch businesses all the way around for just one week, we'd be a lot more sympathetic of the other fellow's problems and know a lot more than we do at present about the cause of his shortcomings and of his present failures. Let the banker sell prunes.

A copy of the "Social Justice Advocate," the publicity organ of the Social Credit League, has just come to our desk. It is full of information on the pros and cons of the subject, and will be well worth perusing. Any of those interested may look this copy over, to see if they wish to subscribe.

the grocer pull teeth, the dentist run a garage, the garage man edit the paper, the editor run the bank for just six little work days and we'd all have our eyes so wide open to what the other s are up against that we would never have the courage to criticize, nor would we be unsympathetic again. Then if the whole caboodle of us were to move on various farms and operate them for another six days per each we'd all be so wise and understanding that the peace and harmony prevailing would make this little old community just about the best place in the world to live. It can't be done, of course, but we could take the thought to ourselves that we don't know anything about the other man's job and concede that for all we know, he is handling it in good shape.

A FURTHER STEP on the Road to Recovery

A Statement by the Prime Minister of Canada

THE Dominion of Canada will offer for public subscription within the next few days the 1934 Refunding Loan. It is an undertaking of such significance to every citizen that I think it fitting to present this brief explanation of its close relation to the welfare and continued progress of our country.

The 1934 Loan is not an incidental effort. It is a part—and an essential part—of the great debt conversion programme in which Canada has been engaged since 1931, and by which we are refunding at maturity the large sums borrowed for wartime purposes. The national importance of this programme—and of the 1934 Loan as part of it—cannot be over emphasized. It is important from three aspects: 1—National Credit; 2—National Economy; 3—National Recovery. I shall deal with each of these in turn.

1. National Credit

National credit means to a nation what an honest reputation means to a man. Its maintenance is a primary essential and necessitates that each obligation be met, fully and promptly, as it comes due. Our debt conversion programme is then, in the first instance, our method of meeting our obligations and thus maintaining our credit.

By this programme Canada has already refunded \$858,000,000 of maturing wartime debt, and completion of the 1934 Loan will bring the refunded total to over one billion dollars. As a result, Canada's credit stands notably high, both at home and in the great money markets of the world.

Striking evidence of our high credit standing was given within the last few months when Canada secured immediate over-subscription of a long-term loan in London at a price to yield the investor less than 3½% and, in New York, obtained a one-year loan of \$50,000,000 bearing interest at 2 per cent. And there is equally striking evidence at the present moment in the fact that every internal issue of Dominion of Canada Bonds now outstanding is selling today at substantially above its issue price. The twelve-year 4% Bonds of the 1933 Refunding Loan, issued at 96½%, are now selling at 104 to yield approximately 3½%.

2. National Economy

The debt conversion programme, in the second place, is providing substantial savings in public interest charges. The debt which we are refunding was incurred with interest rates at artificially high wartime peaks. Refunding is now being accomplished with interest rates throughout the world moving steadily downward toward more normal levels—an encouraging world movement which is essential to business recovery. By refunding under these conditions Canada has already obtained a reduction of the previous interest charges amounting to more than \$9,000,000 per annum, and completion of the 1934 Loan will provide a further saving of over \$5,000,000 per annum.

The annual saving of over \$14,000,000 thus secured has a direct cash benefit to every taxpayer. This saving has much more than offset the interest charges on the debt which has been incurred to meet the extraordinary burden of unemployment relief. It has, to a considerable extent, offset the heavy burdens which the depression period has imposed with respect to railway and other current requirements. It will also pave the way to tax reductions with the return to better times.

3. National Recovery

The debt conversion which Canada has achieved since 1931, by thus maintaining national credit and securing national economy, has been a major factor in our progress toward business recovery.

A year ago, preliminary to the 1933 Refunding Loan, I took occasion to express the belief that Canada had passed the low point of depression and was definitely upon the road to recovery. Today, our progress toward recovery is a matter of established fact. Since the low point of February 1933, the trend of business has been moving steadily upward in an improvement so marked and so consistently sustained that we need no longer doubt its reality.

The facts of business recovery are written beyond dispute in our statistical records. The most significant indices relate to physical volume of business, industrial production, carloadings, electric power production, employment and prices. Here is the record in each case:

	During Past Year*	Since Low Point of Depression February 1933
Physical volume of business...	13.8%	42.8%
Industrial Production...	15.7%	56.9%
Carloadings...	10.3%	29.4%
Electric Power Production...	12.4%	32.7%
Employment...	14.7%	17.1%
Wholesale Prices...	4.0%	13.7%
Farm Products Prices...	7.7%	43.3%

*In the case of carloadings, employment and prices, the latest figures available are those for August; in other cases, those for July.

Our external trade figures are equally encouraging. During the first eight months of the present year, exports of Canadian products increased approximately \$99,000,000, or 32.7% over the same period last year. The corresponding increase for imports has been slightly under \$93,000,000, or 33.2%.

A Further Step

Anyone who reflects upon these three aspects of credit, economy and recovery will at once appreciate that the debt conversion programme is vitally important to every Canadian and that, consequently, the success of the 1934 Loan is the personal concern of every man and woman in the Dominion.

The 1934 Loan is a further step in a great untimed undertaking; its success means a further step on the road to recovery. I know that I need not stress the attractiveness of the Loan as the soundest possible investment, for that will be universally recognized. I do, however, earnestly call upon my fellow Canadians to support this Loan to the full of their abilities as an opportunity to promote our national welfare. I leave it to you in which the individual citizen can render greater service to himself and to his country.

P. B. Bennett
PRIME MINISTER OF CANADA

DOMINION OF CANADA 1934 REFUNDING LOAN
